Previous: 16,120 · +2,300 +14.3%	Previous: 37,910 · +4,770 +12.6%	Previous: 18,980 · +2,360 +12.4%	Previous: 6,910 · +950 +13.7%

EVIDENCE-LED OBSERVATIONS

1

Food & Dining recorded the strongest eligible category growth.

Food & Dining activity grew 20.9% across 42,800 observations.

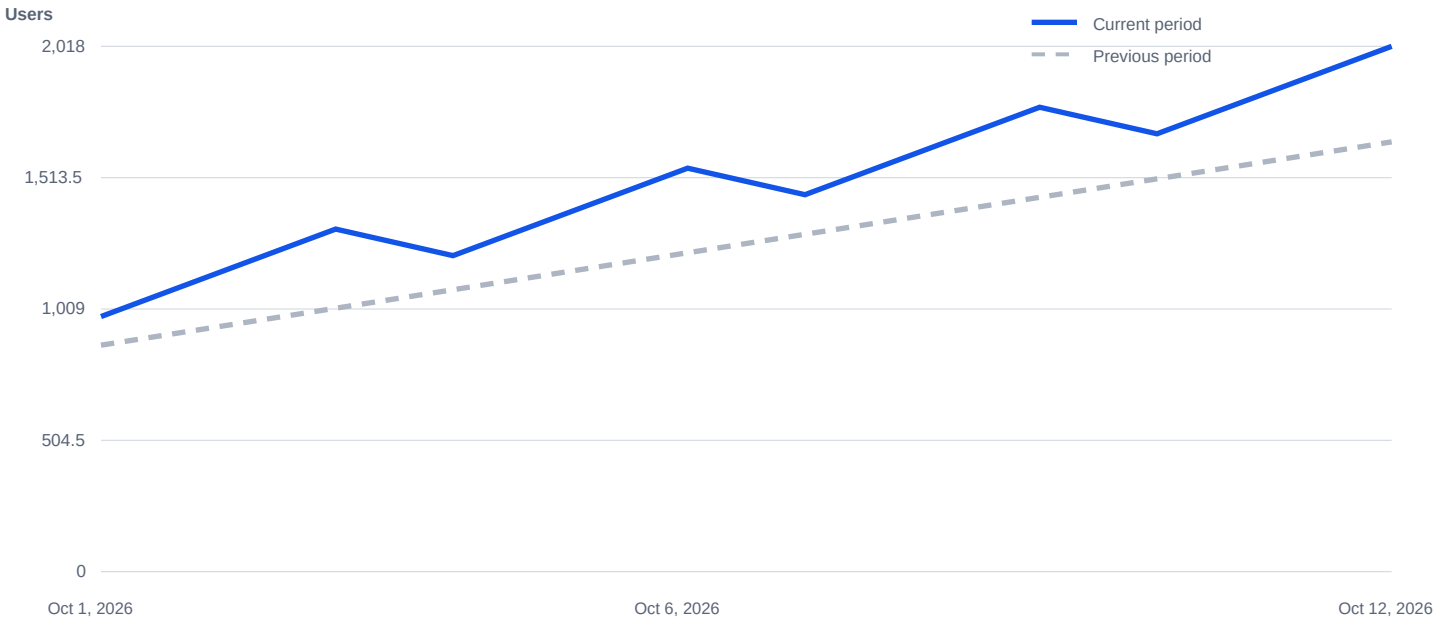
Reporting confidence: verified

Headline behavioral metrics may be used with their definitions and period context.

OBSERVED USAGE

User activity & growth

Distinct observed identities and sessions across the selected UTC reporting window.



DAILY AVERAGE

1,499

HIGHEST OBSERVED

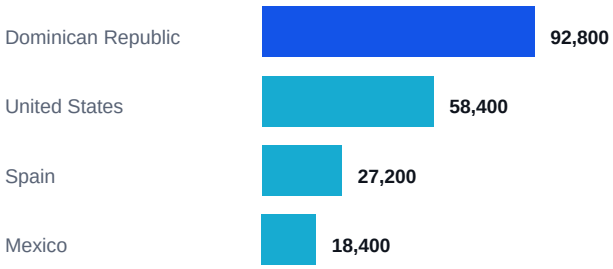
DESTINATION INTELLIGENCE

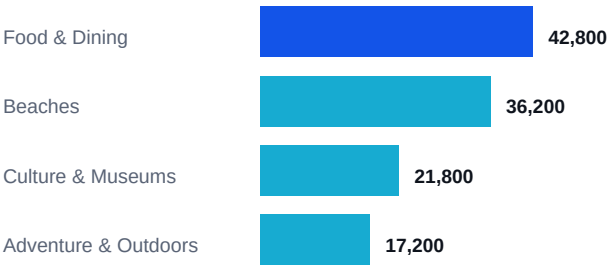
Markets & destination signals

Rankings use privacy-safe observed event aggregates for the selected period; they do not represent complete tourism-market size.

LEADING ELIGIBLE MARKETS



CATEGORY ACTIVITY



EXPLORE DEMAND INDEX

76

0-100 relative activity index; 50 is stable. It is not a percentage, market size, or financial value.

DECISION SUPPORT

Commercial evidence

Deterministic observations connect business questions to values, bounded interpretations, and next investigations.

01 Which category changed most?

FINDING	Food & Dining recorded the strongest eligible category growth.
EVIDENCE	Food & Dining activity grew 20.9% across 42,800 observations.
RECOMMENDED INVESTIGATION	Validate inventory coverage before commercial outreach.

Reporting confidence: high · Limitation: Observed category activity is not market demand, a forecast, or proof of causality.

02 Where should inventory coverage be investigated?

FINDING	Food & Dining activity grew faster than the current comparison baseline.
EVIDENCE	42,800 eligible observations and 20.9% period growth.
RECOMMENDED INVESTIGATION	Audit verified dining inventory and test coverage in the highest-volume market before commercial outreach.

Reporting confidence: high · Limitation: Demand is event-based and does not establish unmet consumer demand or revenue potential.

03 Which route moments warrant a controlled partner test?

FINDING	Route starts increased relative to the previous equivalent window.
EVIDENCE	21,340 starts, up 2,360 or 12.4% period over period.
RECOMMENDED INVESTIGATION	Run a bounded call-to-action test on eligible routes and measure downstream commercial actions.

Reporting confidence: medium · Limitation: Route starts are not completed trips, bookings, or sales.

Commercial actions are observed intent signals. They are not transactions, commissions, or realized revenue.

BUSINESS MODEL

Monetization

Financial performance, commercial activity, and integration readiness remain separate analytical concepts.

VERIFIED FINANCIAL PERFORMANCE

VERIFIED FINANCIAL PERFORMANCE

Unavailable

No authorized reconciled financial figure is available. This is unavailable, not zero.

OBSERVED COMMERCIAL ACTIVITY

7,860

Directions, calls, website clicks, and map opens observed in the selected period. These actions are not sales or revenue.

MONETIZATION READINESS

Advertising	integration pending	No verified financial source is connected.
Subscriptions	integration pending	No verified financial source is connected.
Promoted content	planned	No verified financial source is connected.
Tickets & partners	planned	No verified financial source is connected.
Business intelligence	planned	No verified financial source is connected.

TRUST & GOVERNANCE

Methodology & reporting confidence

Operational readiness, completeness, correctness, confidence, and historical coverage are assessed separately.

Pipeline operations

Operational

The canonical normalized view is active and no aggregation failure is reported.

Data completeness

Verified

No matched-window dead letters were observed for this snapshot.

Metric correctness

Verified

Metrics use the versioned canonical formulas and normalized reporting source.

Reporting confidence

Verified

Headline behavioral metrics may be used with their definitions and period context.

Historical coverage

Verified

No matched-window dead letters were observed for this snapshot.

MATERIAL QUALIFICATION

Validation fixture includes a complete matched-window quality result.

EVIDENCE REVIEW

Conclusions & qualifications

What the selected snapshot supports-and what it does not support.

SUPPORTED FINDINGS

1. Food & Dining recorded the strongest eligible category growth.

Food & Dining activity grew 20.9% across 42,800 observations.

QUALIFICATIONS

- No matched-window dead letters were observed for this snapshot.
- An observed identity is not necessarily a registered account or unique person.
- Place views are not physical visits; route starts are not completions; commercial actions are not sales.
- No authorized reconciled financial figure is available. This is unavailable, not zero.

Aggregated investor-safe output; named rankings require at least 5 observed events. Search text and user-level identifiers are excluded.

REFERENCE

Metric glossary

Definitions connect each metric to its unit, source, limitations, and business meaning.

Active users

active_users

Plain-language definition: Distinct observed authenticated or anonymous identities active in the selected period.

Technical definition: count(distinct authenticated user_id, otherwise anonymous_id)

Unit: observed identities · Source: analytics_normalized_events via Business Analytics Core v3

Known limitations: Rejected lifecycle events and identity resets can reduce observed coverage.

Business interpretation: An observed identity is not necessarily a registered account or a unique person.

Sessions

sessions

Plain-language definition: Distinct valid session identifiers observed in the selected period.

Technical definition: count(distinct session_id)

Unit: sessions · Source: analytics_normalized_events via Business Analytics Core v3

Known limitations: Historically rejected session lifecycle events can reduce coverage.

Business interpretation: A session is an interaction period, not a person.

Place views

place_views

Plain-language definition: Validated place-detail view observations resolved through the canonical entity taxonomy.

Technical definition: count(valid place-view events)

Unit: events · Source: analytics_normalized_events via Business Analytics Core v3

Known limitations: A view is not a physical visit; unresolved catalog metadata can limit segmentation.

Business interpretation: Measures observed detail-page interest, not foot traffic.

REFERENCE

Metric glossary

Definitions connect each metric to its unit, source, limitations, and business meaning.

Route views

route_views

Plain-language definition: Validated route-detail view observations.

Technical definition: count(valid route-view events)

Unit: events · Source: analytics_normalized_events via Business Analytics Core v3

Known limitations: A route view does not imply a route was started or completed.

Business interpretation: Measures observed route consideration.

Route starts

route_starts

Plain-language definition: Validated route-start events; not distinct routes or users.

Technical definition: count(*) where event_name = route_start

Unit: events · Source: analytics_normalized_events via Business Analytics Core v3

Known limitations: A route start is not a completed trip; repeated starts remain separate events.

Business interpretation: Measures route-start activity, not route completion.

Route completions

route_completions

Plain-language definition: Validated route-complete events.

Technical definition: count(*) where event_name = route_complete

Unit: events · Source: analytics_normalized_events via Business Analytics Core v3

Known limitations: Missing completion events make this metric unavailable or partial.

Business interpretation: A completion event is distinct from a route start.

REFERENCE

Metric glossary

Definitions connect each metric to its unit, source, limitations, and business meaning.

Commercial actions

commercial_actions

Plain-language definition: Observed directions, call, website, and map-open actions.

Technical definition: directions + calls + website clicks + map opens

Unit: events · Source: analytics_normalized_events via Business Analytics Core v3

Known limitations: Actions are not reconciled to transactions, commissions, or revenue.

Business interpretation: Measures intent signals only; it is not sales or revenue.

Explore Demand Index

demand_index

Plain-language definition: Versioned composite of eligible demand, growth, intent, supply, and momentum components.

Technical definition: Business Analytics Core Demand Index v1

Unit: index from 0 to 100 · Source: Business Analytics Core derived metric

Known limitations: The index is not market size, a percentage, or financial value.

Business interpretation: 50 indicates a stable eligible signal; higher or lower values reflect relative movement.

Verified revenue

verified_revenue

Plain-language definition: Recognized or measured monetary value from an authorized financial integration.

Technical definition: source-system financial value under the approved recognition policy

Unit: source currency · Source: authorized financial source

Known limitations: Estimated earnings, finalized earnings, recognized revenue, and cash collections remain distinct.

Business interpretation: Unavailable values must never be presented as zero.
